Yea need to get off one stop later 'moulon'

[Redacted] 1:02 PM

Súper, thank you!

Anastasia Bezerianos 2:53 PM

The data provider slides from the datafaire are here: https://drive.google.com/drive/folders/1al-dGhyWqQg56JtoT-FBZNM2R_YxERa?usp=sharing (edited)

December 5th, 2018

Petra Isenberg 11:06 AM

Tomorrow we will be working with Tableau in class. Please follow the instructions to install Tableau ahead of time - and also bring a laptop with the software installed (if you don't have one, just team up):

Please forward these instructions to your students:

Download Tableau Desktop and Tableau Prep here

Select each product download link to get started. When prompted, enter your school email address for Business E-mail and enter the name of your school for Organization.

Activate with your product key: TCK4-E998-3110-C135-BED8

Are your students new to Tableau? Share our free Data Analytics for University Students guide to help them get started.

Students can continue using Tableau after the class is over by individually requesting their own one-year license through the Tableau for Students program.

Here is the download link that got lost here: <https://www.tableau.com/tft/activation>

The student guide link: <https://www.tableau.com/university-students>

and the tableau for students program: <http://tableau.com/students>

Tableau Software

Tableau for Students

Students can download Tableau Desktop and Tableau Prep for free through Academic Programs. Try it now.

SLACK

TODO

Send an email now:

Subject: InfoVis Class

petra.Isenberg@inria.fr

Sign with your full name as we can find it on university info

GRADING SCHEME

- Assignments: 66%
 - check the website for due dates of assignments and how to submit them
 - Slack participation
- Exam: 33%

Web site will have information on each assignment
don't forget to contact Petra for **Slack** invites!

READINGS

No specific readings necessary

Will announce readings on a per-lecture basis for those interested in learning more

ELECTRONICS POLICY

Laptops and devices okay
(in fact you'll need them)
...but use them for work!

BEHAVIOR & SOCIETY

Students are Better Off without a Laptop in the Classroom

What do you think they'll actually use it for?

By Cindi May on July 11, 2017

Credit: Getty Images

As recent high school graduates prepare for their migration to college in the fall, one item is sure to top most students' shopping wish lists: a laptop computer. Laptops are ubiquitous on university campuses, and are viewed by most students as absolute must-have items, right alongside laundry detergent, towels, and coffee pots.

Without question, personal laptops can enhance the college experience by facilitating engagement with online course material, providing access to sources for research, maximizing internship searches, and even improving communication with friends and parents. Many students also opt to bring their laptops to class so that they can take notes, view online lecture slides, and search the web for course-related material. This practice, it

AFTER TODAY YOU WILL...

have gained an overview of the research area

learned basic principles of data representation and interaction

Why

INFORMATION VISUALIZATION

“The ability to take data -- to be able to understand it, to process it, to extract value from it, to visualize it, to communicate it - that's going to be a hugely important skill in the next decades.”

Hal Varian, chief economist at Google

“Data visualization is going to change the way our analysts work with data. They’re going to be expected to respond to issues more rapidly. And they’ll need to be able to dig for more insights – look at data differently, more imaginatively. Data visualization will promote that creative data exploration.”

Simon Samuel Head of Customer Value Modeling for a large bank in the UK

Country Profile

France

Factors determining job location decisions

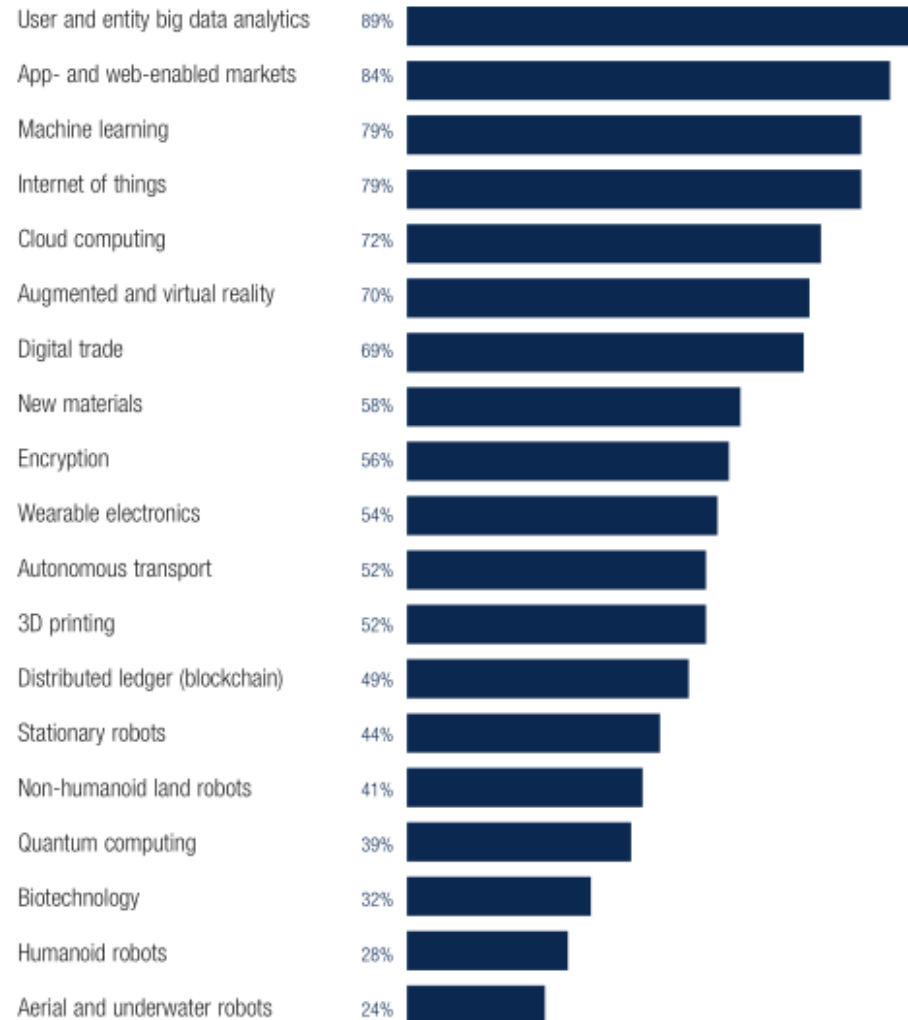

Industry	Primary	Secondary	Tertiary
Automotive, Aerospace, Supply Chain & Transport	Talent availability	Quality of the supply chain	Production cost
Aviation, Travel & Tourism	Talent availability	Organization HQ	Ease of importing talent
Chemistry, Advanced Materials & Biotechnology	Talent availability	Production cost	Labour cost
Consumer	Labour cost	Geographic concentration	Talent availability
Energy Utilities & Technologies	Labour cost	Production cost	Talent availability
Financial Services & Investors	Talent availability	Labour cost	Organization HQ
Global Health & Healthcare	Talent availability	Labour cost	Production cost
Information & Communication Technologies	Talent availability	Labour cost	Organization HQ
Oil & Gas	Geographic concentration	Talent availability	Organization HQ
Professional Services	Talent availability	Strong local ed. provision	Labour cost

Range of options: Flexibility of labour laws, Geographic spread, Quality of the supply chain, Ease of importing talent, Labour cost, Location of raw materials, Organization HQ, Production cost, Strong local education provision, Talent availability.

Emerging job roles

Managing Directors and Chief Executives	Sales Representatives, Wholesale and Manufacturing,
Software and Applications Developers and Analysts	Technical and Scientific Products
Sales and Marketing Professionals	Assembly and Factory Workers
General and Operations Managers	Human Resources Specialists
Data Analysts and Scientists	Financial and Investment Advisers
	Financial Analysts

Technology adoption *(share of companies surveyed)*

QUESTION

how can humans effectively access data?

- understand its structure?
- make comparisons?
- make decisions?
- gain new knowledge?
- convince others?
- ...

MANY POSSIBLE WAYS TO ADDRESS...

Information Visualization

EXAMPLE

I		II		III		IV	
x	y	x	y	x	y	x	y
10.0	8.04	10.0	9.14	10.0	7.46	8.0	6.58
8.0	6.95	8.0	8.14	8.0	6.77	8.0	5.76
13.0	7.58	13.0	8.74	13.0	12.74	8.0	7.71
9.0	8.81	9.0	8.77	9.0	7.11	8.0	8.84
11.0	8.33	11.0	9.26	11.0	7.81	8.0	8.47
14.0	9.96	14.0	8.10	14.0	8.84	8.0	7.04
6.0	7.24	6.0	6.13	6.0	6.08	8.0	5.25
4.0	4.26	4.0	3.10	4.0	5.39	19.0	12.50
12.0	10.84	12.0	9.13	12.0	8.15	8.0	5.56
7.0	4.82	7.0	7.26	7.0	6.42	8.0	7.91
5.0	5.68	5.0	4.74	5.0	5.73	8.0	6.89

Raw Data from Anscombe's Quartet

STATISTICAL ANALYSIS

For all four columns, the statistics are identical

I		II		III		IV	
x	y	x	y	x	y	x	y
10.0	8.04	10.0	9.14	10.0	7.46	8.0	6.58
8.0	6.95	8.0	8.14	8.0	6.77	8.0	5.76
13.0	7.58	13.0	8.74	13.0	12.74	8.0	7.71
9.0	8.81	9.0	8.77	9.0	7.11	8.0	8.84
11.0	8.33	11.0	9.26	11.0	7.81	8.0	8.47
14.0	9.96	14.0	8.10	14.0	8.84	8.0	7.04
6.0	7.24	6.0	6.13	6.0	6.08	8.0	5.25
4.0	4.26	4.0	3.10	4.0	5.39	19.0	12.50
12.0	10.84	12.0	9.13	12.0	8.15	8.0	5.56
7.0	4.82	7.0	7.26	7.0	6.42	8.0	7.91
5.0	5.68	5.0	4.74	5.0	5.73	8.0	6.89

Mean of x	9.0
Variance of x	11.0
Mean of y	7.5
Variance of y	4.12
Correlation between x and y	0.816
Linear regression line	$y = 3 + 0.5x$

VISUAL REPRESENTATION OF THE DATA

Visual representation reveals a different story

I		II		III		IV	
x	y	x	y	x	y	x	y
10.0	8.04	10.0	9.14	10.0	7.46	8.0	6.58
8.0	6.95	8.0	8.14	8.0	6.77	8.0	5.76
13.0	7.58	13.0	8.74	13.0	12.74	8.0	7.71
9.0	8.81	9.0	8.77	9.0	7.11	8.0	8.84
11.0	8.33	11.0	9.26	11.0	7.81	8.0	8.47
14.0	9.96	14.0	8.10	14.0	8.84	8.0	7.04
6.0	7.24	6.0	6.13	6.0	6.08	8.0	5.25
4.0	4.26	4.0	3.10	4.0	5.39	19.0	12.50
12.0	10.84	12.0	9.13	12.0	8.15	8.0	5.56
7.0	4.82	7.0	7.26	7.0	6.42	8.0	7.91
5.0	5.68	5.0	4.74	5.0	5.73	8.0	6.89

X Mean: 54.26
Y Mean: 47.83
X SD : 16.76
Y SD : 26.93
Corr. : -0.06

Other benefits of visualization

- expand human working memory
 - offload cognitive resources to the visual system,
- reduce search
 - by representing a large amount of data in a small space,
- enhance the recognition of patterns
 - by making them visually explicit
- aid monitoring of a large number of potential events
- provides a manipulable medium & allows exploration of a space of parameter values.

L'occhio,
che si dice finestra dell'anima,
è la principale via donde il comune
senso può piú copiosamente e
magnificamente considerare
le infinite opere di natura.

Leonardo da Vinci
(1452 - 1519)

The eye...
the window of the soul,
is the principal means
by which the central sense
can most completely and
abundantly appreciate
the infinite works of nature.

Information visualization

- Create visual representation
- Concentrates on abstract data
- Includes interaction

Official Definition:

The use of computer-supported, interactive, visual representations of abstract data to amplify cognition.
[Card et al., 1999]

Hint: but there is more to it

Functions of Visualizations

- Recording information
 - Tables, blueprints, satellite images
- Processing information
 - needs feedback and interaction
- Presenting information
 - share, collaborate, revise
 - for oneself, for one's peers, and to teach
- Seeing the unseen

Visualization of abstract data has been practiced for hundreds of years...

HISTORICAL EXAMPLES

Napoleon's March on Moscow

Charles Minard, 1869

Named the best statistical graphic ever drawn (by Edward Tufte)

- Includes: spatial layout linked with stats on: army size, temperature, time
- Tells a story in one overview

More info: The Visual Display of Quantitative Information (Tufte)

Carte Figurative des pertes successives en hommes de l'Armée Française dans la campagne de Russie 1812-1813.

Dressée par M. Minard, Inspecteur Général des Ponts et Chaussées en retraite. Paris, le 20 Novembre 1869.

Les nombres d'hommes présents sont représentés par les largeurs des zones colorées à raison d'un millimètre pour dix mille hommes; ils sont de plus écrits en travers des zones. Le rouge désigne les hommes qui entrent en Russie, le noir ceux qui en sortent. — Les renseignements qui ont servi à dresser la carte ont été puisés dans les ouvrages de M.M. Chiers, de Ségur, de Fezensac, de Chambray et le journal inédit de Jacob, pharmacien de l'Armée depuis le 28 Octobre.

Pour mieux faire juger à l'œil la diminution de l'armée, j'ai supposé que les corps du Prince Jérôme et du Maréchal Davout qui avaient été détachés sur Minsk et Mohilow et ont rejoint vers Orscha et Witebsk, avaient toujours marché avec l'armée.

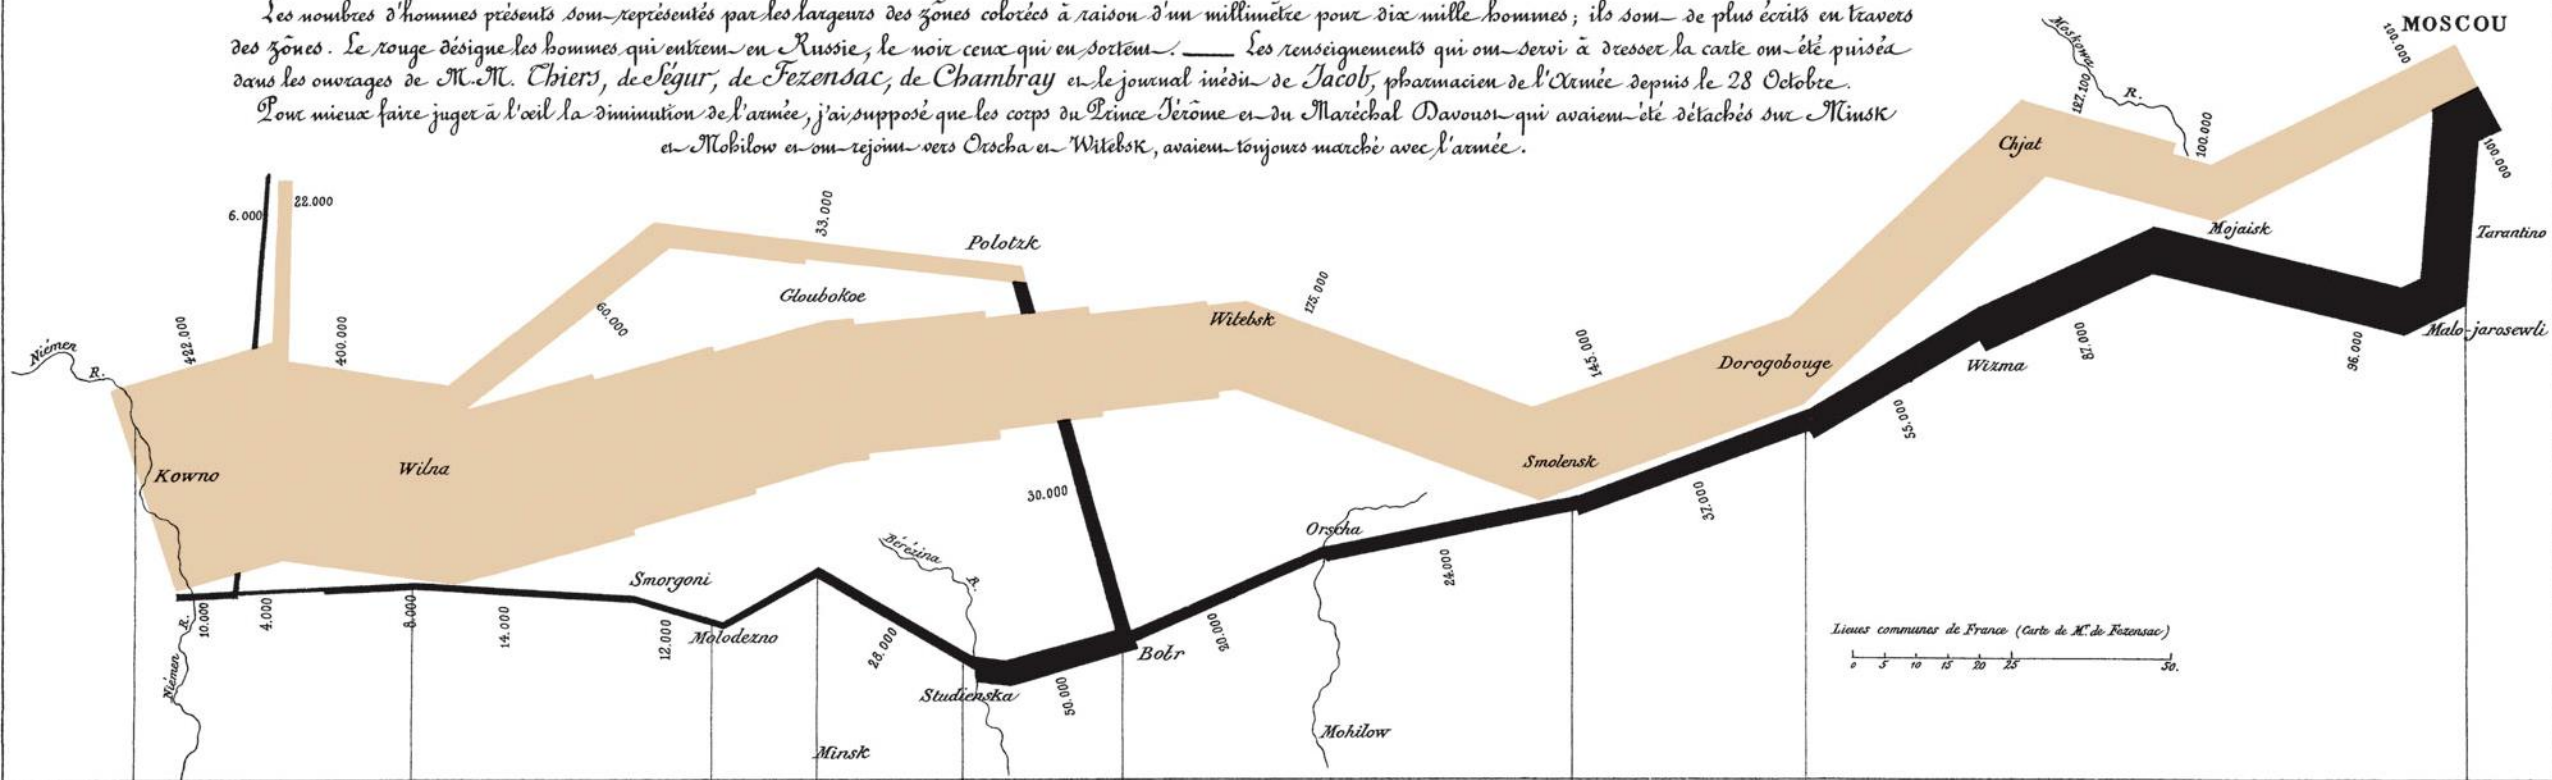

TABLEAU GRAPHIQUE de la température en degrés du thermomètre de Réaumur au dessous de zéro.

Les Cosaques passent au galop le Niemen, gelé.

The Broadway Street Pump

- In 1854 cholera broke out in London
 - 127 people near Broad Street died within 3 days
 - 616 people died within 30 days
- “Miasma in the atmosphere”
- Dr. John Snow was the first to link contaminated water to the outbreak of cholera
- How did he do it?
 - he talked to local residents
 - identified a water pump as a likely source
 - used maps to illustrate his theory
 - convinced authorities to disable the pump

John Snow, 1854

It is difficult to create

CREATE VISUALIZATIONS

GOOD

What is a representation?

- A representation is
 - a formal system or mapping by which the information can be specified (D. Marr)
 - a sign system in that it stands for something other than its self.
- for example: the number thirty-four

34

decimal

100010

binary

XXXIV

roman

Presentation

- different representations reveal different aspects of the information
 - decimal: counting & information about powers of 10,
 - binary: counting & information about powers of 2,
 - roman: impress your friends (outperformed by positional system)
- presentation
 - how the representation is placed or organized on the screen

34, **34**, 34

Principles of Graphical Excellence

- Well-designed presentation of interesting data
 - a matter of *substance, statistics, design*
- Complex ideas communicated with clarity, precision, efficiency
- Gives the viewer the greatest number of ideas in the shortest time with the least ink in the smallest space
- Involves almost always multiple variables
- Tell the truth about the data

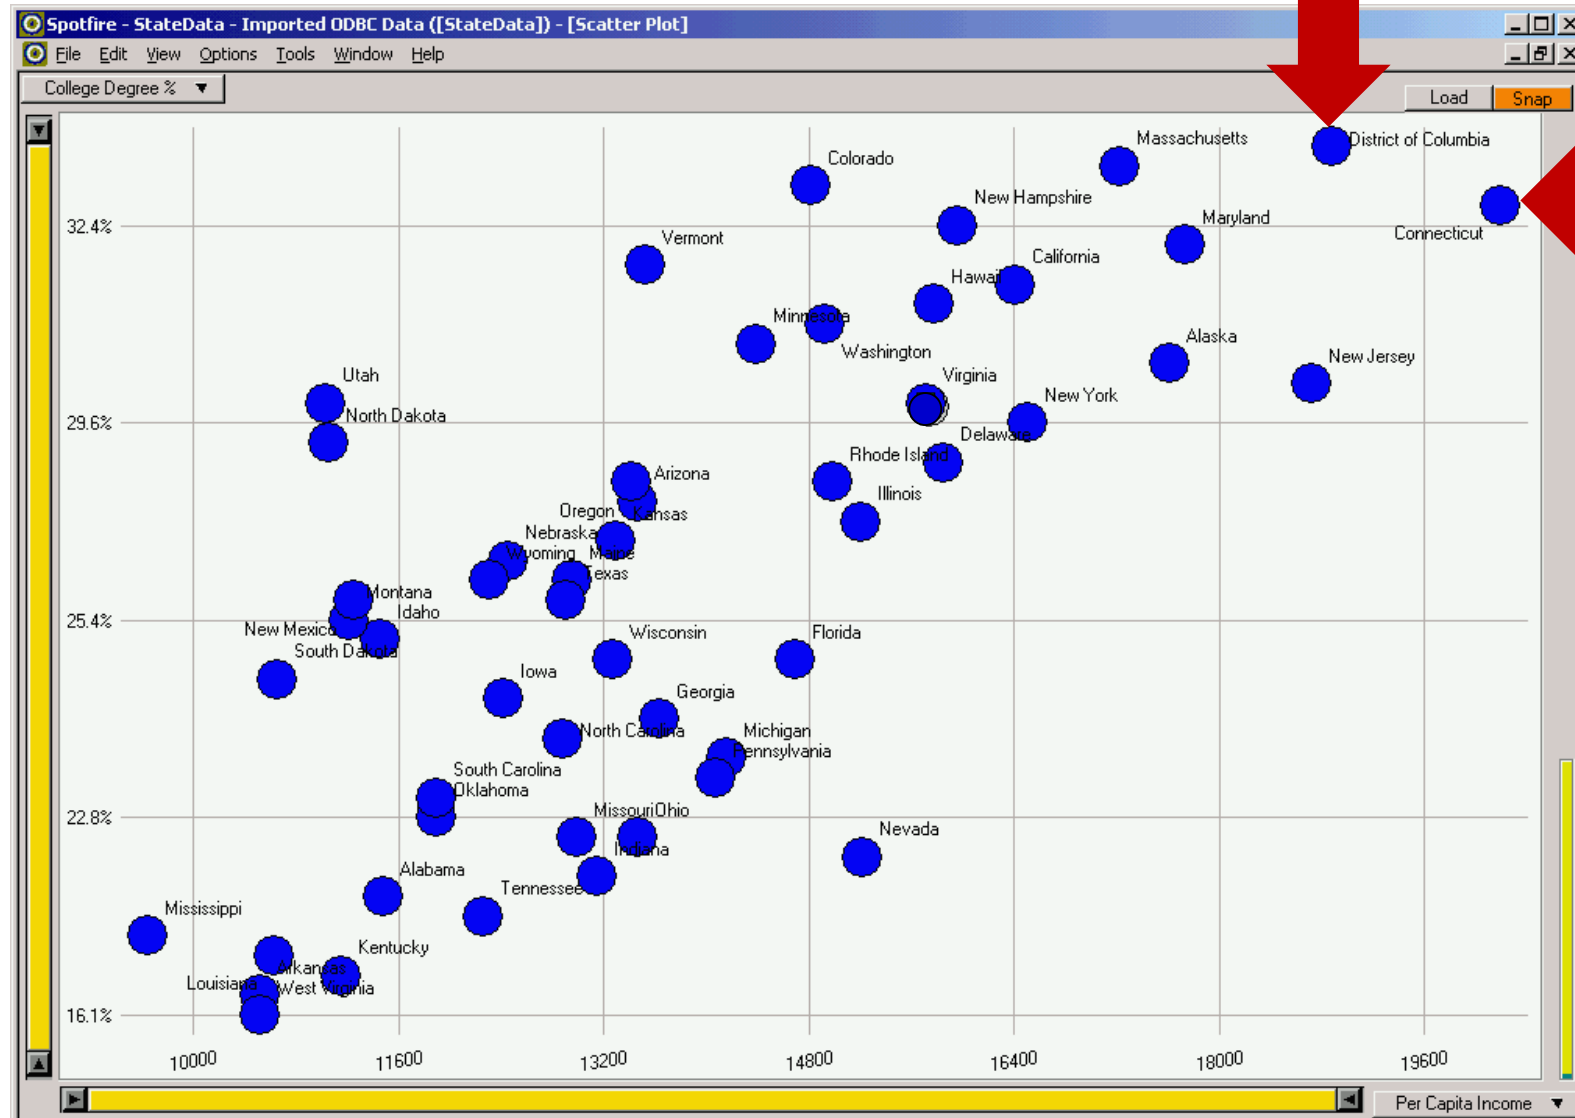

Or a bit more simply...

- Solving a problem simply means representing it so as to make the solution transparent ... (Simon, 1981)
- Good representations:
 - allow people to find relevant information
 - information may be present but hard to find
 - allow people to compute desired conclusions
 - computations may be difficult or “for free” depending on representations

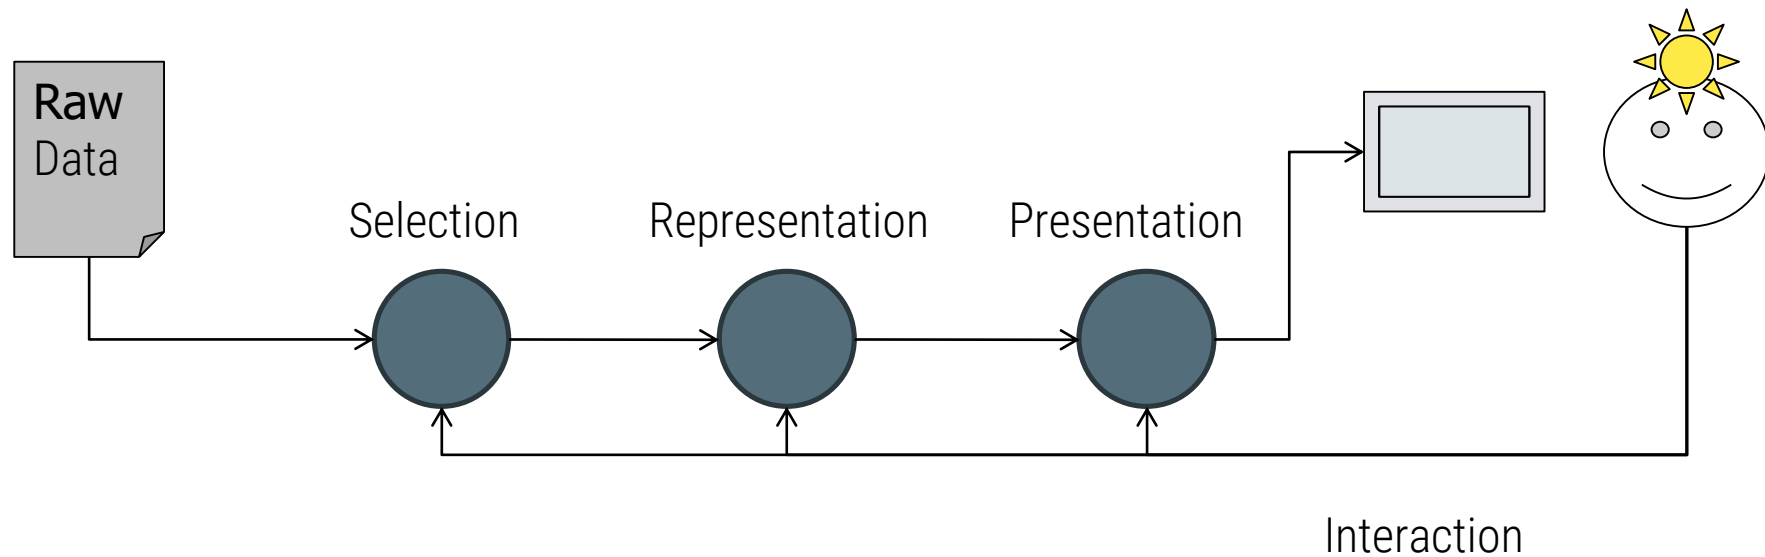

Good representation?

State	College Degree %	Per Capita Income
Alabama	20.6%	11486
Alaska	30.3%	17610

Good representation!

How do we arrive at a visualization?

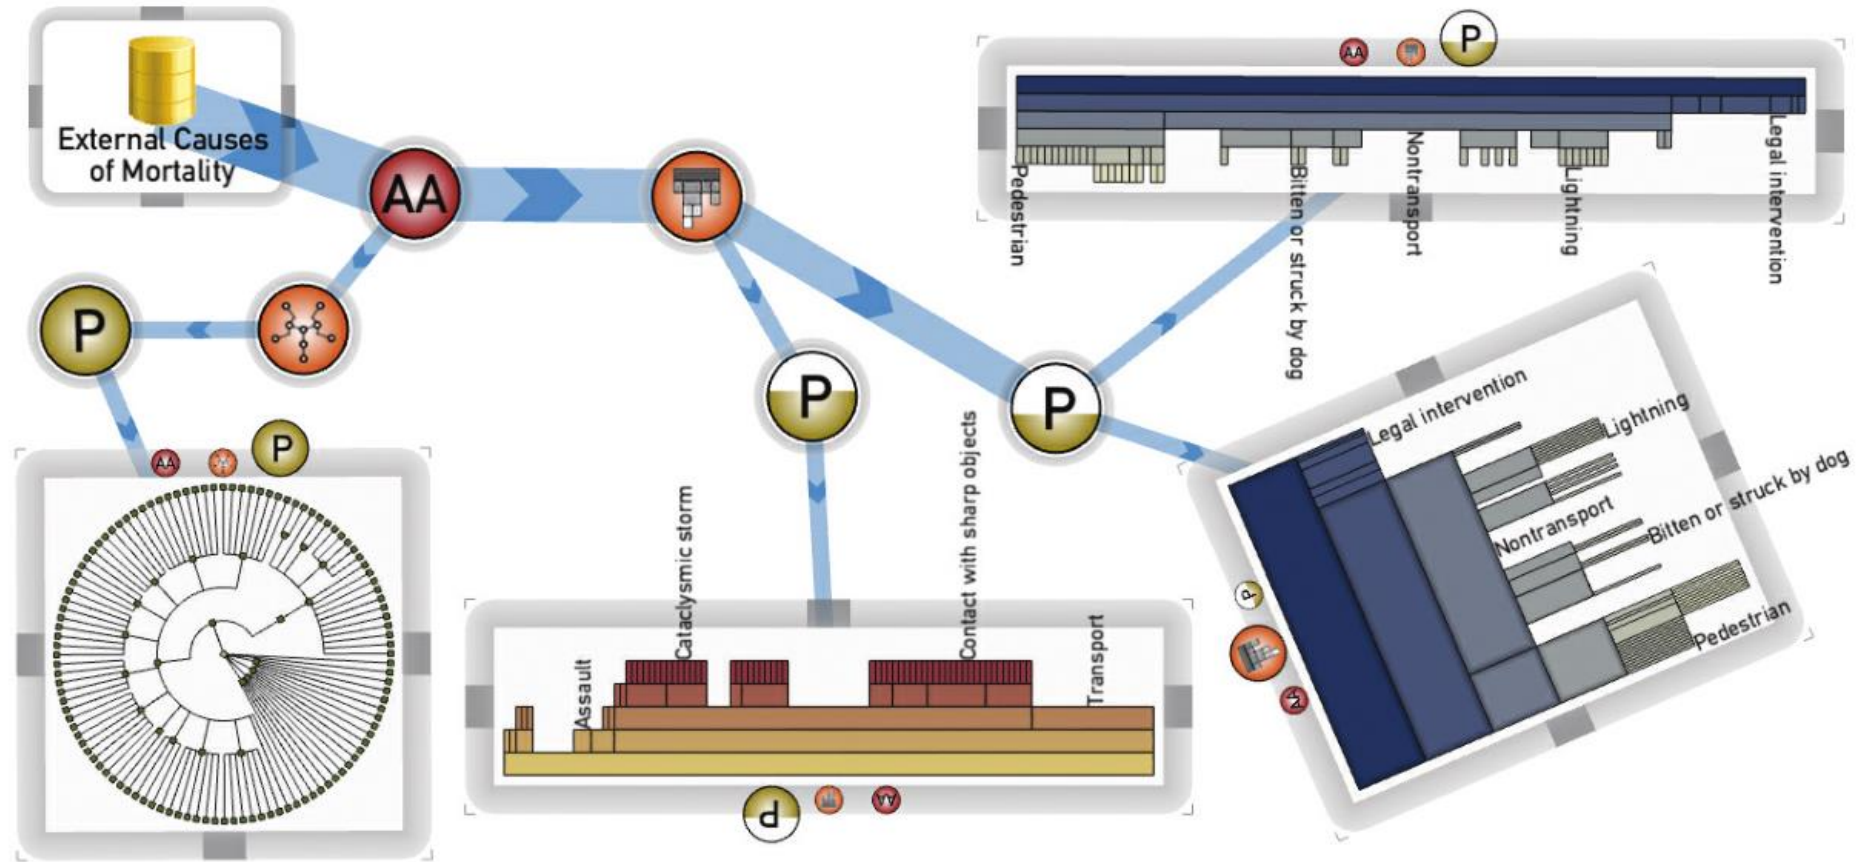

The Visualization Pipeline

Visualization Reference Model

Also a visualization pipeline a bit expanded

Visualization pipeline in an image

Knowledge Crystallization Cycle

Working with visualizations in NOT a linear process

[Card et al., 1999]

Pitfalls

- Selecting the wrong data
- Selecting the wrong data structure
- Filtering out important data
- Failed understanding of the types of things that need to be shown
- Choosing the wrong representation
- Choosing the wrong presentation format
- Inappropriate interactions provided to explore the data

Recap

- So far you
 - learned what information visualization is
 - learned about the advantages of visualization
 - saw a number of examples (historical and new)
- Next
 - you will get to know your data
 - you will learn about the basic components of visualization

Data

- Data is the foundation of any visualization
- The visualization designer needs to
 - understand the data properties
 - know what meta-data is available
 - know what people want from the data

Nominal, Ordinal and Quantitative

- Nominal / Categorical (labels)
 - Fruits: apples, oranges
- Ordered
 - Quality of meat: grade A, AA, AAA
 - Can be counted and ordered, but not measured
- Quantitative
 - Intervals or Ratios
 - Can do arithmetic on it

Data-Type Taxonomy

- 1D (linear)
- Temporal
- 2D (maps)
- 3D
- nD (relational)
- Trees (hierarchies)
- Networks (graphs)

vis examples later

Why is this important?

- Nominal, ordinal, and quantitative data are best expressed in different ways visually
- Data types often have inherent tasks
 - temporal data (comparison of events)
 - trees (understand parent-child relationships)
 - ...
- But:
 - any data type (1D, 2D,...) can be expressed in a multitude of ways!

Visualization's Main Building Blocks

Marks which represent:

Points

- “A point represents a location on the plane that has **no theoretical length or area**. This signification is independent of the size and character of the mark which renders it visible.”
- a location
- marks that indicate points can vary in all visual variables

Lines

- “A line signifies a phenomenon on the plane which has **measurable length but no area**. This signification is independent of the width and characteristics of the mark which renders it visible.”
- a boundary, a route, a connection

Areas

- “An area signifies something on the plane that **has measurable size**. This signification applies to the entire area covered by the visible mark.”
- an area can change in position but not in size, shape or orientation without making the area itself have a different meaning

Visual Variables Applicable to Marks

Additional Variables for Computers

- **motion**

- direction, acceleration, speed, frequency, onset, 'personality'

- **saturation**

- colour as Bertin uses largely refers to hue, saturation != value

Extending those from Semiology of Graphics (Bertin)

Additional Variables for Computers

- **flicker**
 - frequency, rhythm, appearance
- **depth? 'quasi' 3D**
 - depth, occlusion, aerial perspective, binocular disparity
- **Illumination**
- **transparency**

Characteristics of Visual Variables

- **Selective:**
Can this variable allow us to spontaneously differentiate/isolate items from groups?
- **Associative:**
Can this variable allow us to spontaneously group items in a group?
- **Ordered:**
Can this variable allow us to spontaneously perceive an order?
- **Quantitative:**
Can the difference between two marks in this variable be interpreted numerically ?
- **Length (resolution):**
Across how many changes in this variable are distinctions possible?

Visual Variable: Position

- ✓ • selective
- ✓ • associative
- ✓ • quantitative
- ✓ • order
- ✓ • length
(resolution)

Visual Variable: Size

✓ • selective

✓ • associative

~ • quantitative

✓ • order

✓ • length
(resolution)

Size

points

lines

areas

Visual Variable: Shape

 • selective

 • associative

 • ordered

 • quantitative

 • length
(resolution)
– infinite

Shape

points

lines

areas

Visual Variable: Value

✓ • selective

✓ • associative

≠ • quantitative

✓ • order

✓ • length (resolution)

- theoretically infinite but practically limited
- association and selection ~ < 7 and distinction ~ 10

Value

points

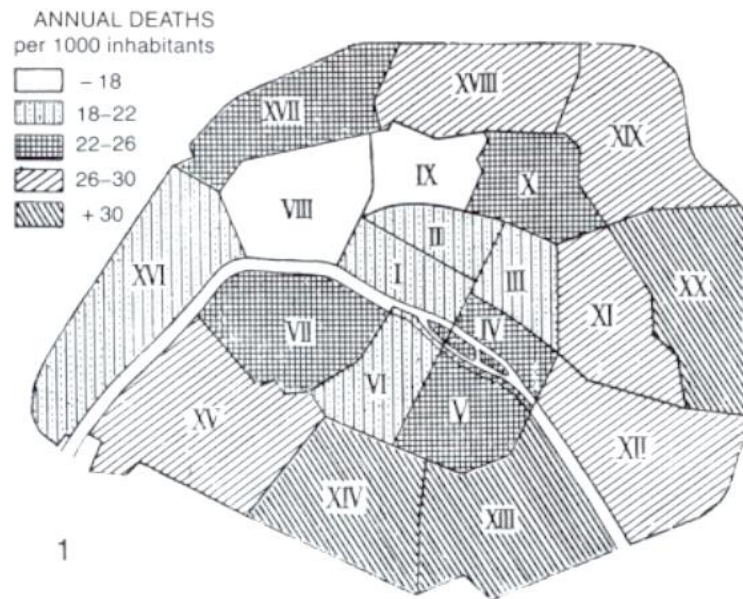

lines

areas

Value

ordered, cannot be reordered

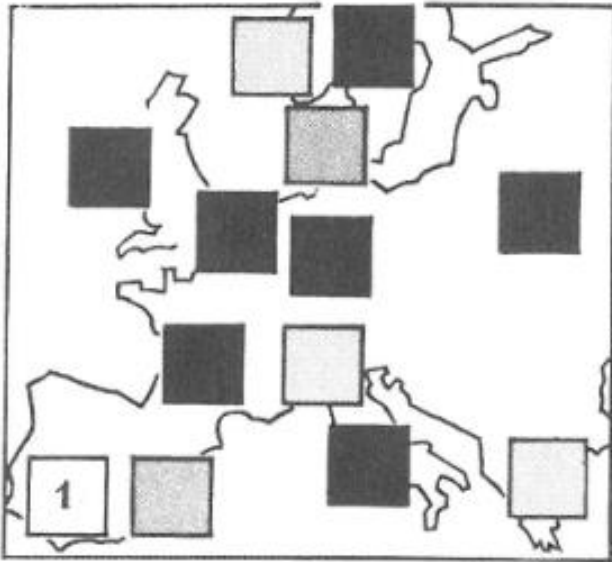

Values not ordered correctly according to scale
Information has to be read point by point

Values ordered correctly
Image much more useful

Value

is not quantitative

if Portugal is 1, what is France?
you need a legend!

if Portugal is 1, what is France?
still hard, but doable

Visual Variable: Colour

• selective

• associative

• quantitative

• order

• length (resolution)

- theoretically infinite but practically limited
- association and selection ~ < 7 and distinction ~ 10

Visual Variable: Orientation

✓ • selective

✓ • associative

~~≠~~ • quantitative

~~≠~~ • order

✓ • length (resolution)

• ~5 in 2D; ? in 3D

Orientation

points

lines

areas

Visual Variable: Texture

✓ • selective

✓ • associative

≠ • quantitative

≠ • order

✓ • length
(resolution)

- theoretically infinite

Texture

points

lines

areas

Visual Variable: Motion

- ✓ • selective
 - motion is one of our most powerful attention grabbers
- ✓ • associative
 - moving in unison groups objects effectively
- ~~≠~~ • quantitative
 - subjective perception
- ~~≠~~ • order
- ? • length (resolution)
 - distinguishable types of motion?

Motion

Visual Variables

Visual Variable	Selective	Associative	Quantitative	Order	Length
Position	Yes	Yes	Yes	Yes	Dependant on resolution
Size	Yes	Yes	Approximate	Yes	Association: 5; Distinction: 20
Shape	With Effort	With Effort	No	No	Infinite
Value	Yes	Yes	No	Yes	Association: 7; Distinction: 10
Hue	Yes	Yes	No	No	Association: 7; Distinction: 10
Orientation	Yes	Yes	No	No	4
Grain	Yes	Yes	No	No	5
Texture	Yes	Yes	No	No	Infinite
Motion	Yes	Yes	No	Yes	Unknown

Summary

More Accurate

↑

↓

Less Accurate

	Quantitative	Ordinal	Nominal
	Position 	Position 	Position 
	Length 	Density 	Hue 
	Angle 	Saturation 	Density 
	Slope 	Hue 	Saturation 
	Area 	Length 	Shape 
	Density 	Angle 	Length 
	Saturation 	Slope 	Angle 
	Hue 	Area 	Slope 
	Shape 	Shape 	Area 

Jacques Bertin refined by Cleveland&McGill then by Card&Mackinlay

Summary

- Now you know the main building blocks are marks
- Marks are modified by visual variables
- Visual variables have specific characteristics
- These characteristics influence how the data will be perceived
